DATA SOURCES AND METHODS

Data were examined regarding bank lending and public sources of business capital, and analyzed over time and space to see how the supply of capital is represented geographically and has changed over time. Several sources of data were analyzed:

- Federal Financial Institutions Examination Council (FFIEC) data from banking institutions provided as part of their compliance with the Community Reinvestment Act.
- The Small Business Administration’s (SBA) 7(a) Loan Guarantees, including the Small and Rural Lender Advantage program, and 504 Loan Program.
- USDA’s business lending programs, including the Intermediary Relending Program (IRP), Rural Business Enterprise Grants (RBEG), and Business & Industry Loan Guarantees (B&I).

Data were obtained for 2005 through 2008 and divided by the total number of firms in each county. In the case of SBA loans, data were divided by the total number of small firms (less than 500 employees), as that relates to the qualifying criteria for the loans.

FEDERAL FINANCIAL INSTITUTIONS EXAMINATION COUNCIL

A series of eight maps represent the total amount and total number of FFIEC loans per firm in 2005, 2006, 2007, and 2008 (Maps 1-8 below).

Apparent from this series of maps is the greater number and amount of loans to businesses in western and eastern U.S. counties, as compared to the Midwest.

SMALL BUSINESS ADMINISTRATION – 7A AND 504 LOAN PROGRAM

A series of eight maps show the total amount of SBA 7(a) and SBA 504 loans per small firm (firms with less than 500 employees) in 2005, 2006, 2007 and 2008 (Maps 9-16 below).

Apparent in these maps, again, is the regional concentration of lending, particularly in the western U.S. counties, and the large gaps in much of the Midwest, representing much of rural America.

The wide variation in amount of loans per firm and in the geographic distribution of business lending suggest that a more detailed examination by individual program would be useful, as well as pooling data over a number of years for a more representative picture of USDA investing.
Total Amount of Small Business Loans Per Firm, 2005

Number and Amount of Loans: Federal Financial Institutions Examination Council, Community Reinvestment Act Data
Number of Firms: Small Business Administration

Note: Alaska and Hawaii not shown to scale
